This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

**Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

**About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

# PREFACE.

The preparation of this catalogue was begun in October, 1905. Sixteen months have been consumed in the work; an enormous correspondence, embracing all parts of this country and many foreign countries has been carried on; and an effort made to locate, as accurately as possible, every living alumnus of the University, and tell something about him.

Some inaccuracies will be found in the book; many of them due to the fact that during these sixteen months of preparation, many changes have taken place; alumnae have married; teachers have taken new positions, and other changes have occurred knowledge of which came too late to make the correction. An effort has been made to correct these errors, so far as possible, in the addenda; some inaccuracies, due also to the human fallibility of the compiler, may be found, although every effort has been made to avoid them.

In the classes of the College of Letters and Science from 1902 on, a seeming lack of uniformity requires explanation. In a number of cases two addresses are given; one in capital letters on the first line, and one in roman letters below; in each case, so far as possible, the wishes of the individual have been followed, so that the address which the alumnus seemed to regard as more permanent is given above. In a number of cases, the address given below is the home address.

The work has been a long and at times wearisome task. The late Professor David B. Frankenburger, '69, gave active aid; Herman Blum, ex. '07, of St. Louis, who acted as assistant to the compiler during the first twelve months of the work, Isaac S. Bradley, '75, Mabel J. Bradley, '04, and Matilda L. Snyder, all of Madison, lent valuable assistance; and, for whatever merit as a work of reference the book may have, they deserve a large share of the credit.

There are a small number of alumni still unlocated. Some of these seem to have vanished completely from the face of the earth. The location and occupation of others may perhaps come to light at a future time.

May the catalogue prove of value to the alumni of the University as a work of reference; the compiler has put his best effort into the work; for whatever assistance it proves to the graduates of the University of Wisconsin, he is thankful.

The compiler of the next catalogue will have a task almost twice as stupendous on his hands; for by 1912, at a conservative estimate, the number of graduates of the University should approximate 10,000.

The data herein contained prove beyond a doubt the material value of a college education; there are few conspicuous successes among the alumni, but the great majority have been moderately successful.

MAX LOEB, Compiler.
